South Africa Hospitality Point Of Sale Software Market Growth & Trends

The South Africa hospitality point of sale software market size is expected to reach USD 200.4 million by 2030, registering a CAGR of 9.7% from 2025 to 2030, according to a new report by Grand View Research, Inc. The adoption of modern payment methods and the need to manage orders, inventory, customers, employees, and accounting information are the factors driving the demand for POS software. Moreover, the growing hospitality industry in South Africa is providing an impetus to the rising demand for hospitality POS solutions. The other factor expected to drive the demand is the need for tracking and managing online food orders and delivery facilities to sustain and grow the business.

South Africa's hospitality industry has upcoming opportunities and possibilities for growth. However, the COVID-19 pandemic is expected to halt the pace of growth as the third wave of COVID-19 is expected to hit the country, which may lead to a strict lockdown. The country faced severe impacts of the COVID-19 in 2020 when the government imposed restrictions including on restaurants and hotels. The lockdown in 2020 majorly affected the restaurant and hotel business as foreign and domestic tourism declined in South Africa. The adverse effect on the hospitality industry growth due to restrictions on international flights, opening of hotels and restaurants, and movement of people, subsequently led to a decline in the number of existing customers and new purchases of POS software subscriptions.

Consumers are resorting to online delivery and payment methods. The restaurants can operate their businesses by following government guidelines for food delivery. Furthermore, staycations became a trend in South Africa when the government relaxed the lockdown restrictions, which allowed the hotels to generate significant revenue when the tourism industry witnessed a decline in the country. These new trends in the hospitality industry have further helped the POS vendors to understand changing scenarios and offer a suitable solution. The POS vendors are expecting a boost in the demand for hospitality POS solutions post the COVID-19 pandemic as the consumers confined to their homes are yearning for travel and re-exploring restaurants for the dining experience. Thus, a boost in the hospitality business post the pandemic is expected to trigger the demand for POS solutions and contribute to the market growth over the forecast period.

South Africa Hospitality Point Of Sale Software Market Report Highlights

The open-circuit SCBA segment accounted for the largest revenue share of 68.0% in the North America self-contained breathing apparatus industry in 2024.

The Type III segment accounted for the largest revenue share in the North American market for SCBAs in 2024. Type III cylinders consist of a steel or aluminum liner wrapped in composite materials such as fiberglass or carbon fiber.

The fire services segment accounted for the leading revenue share in the North America self-contained breathing apparatus industry in 2024.
