Abstracts

The global sperm count test market size was estimated at USD 362.39 million in 2025 and is projected to reach USD 559.89 million by 2033, growing at a CAGR of 5.65% from 2026 to 2033. This growth is attributed to the rising prevalence of male infertility, growing awareness about reproductive health, and the importance of early fertility assessment among men.

In addition, delayed parenthood and changing social trends have increased the demand for fertility evaluations as couples seek medical assistance to conceive. Moreover, increased availability of fertility clinics, supportive government initiatives for reproductive health, and higher healthcare spending in both developed and emerging economies continue to propel demand for sperm count tests.
