Abstracts

The global stem cell assays market size was estimated at USD 3.92 billion in 2024 and is projected to reach USD 12.85 billion by 2033, growing at a CAGR of 14.80% from 2025 to 2033. The growing need for physiologically relevant models in drug discovery, disease modeling, and regenerative medicine is the main factor propelling the market growth.

Pharmacies and researchers are looking for trustworthy platforms resembling human tissues more closely than conventional models, like organoid and iPSC-based systems. By improving drug efficacy and safety prediction, these assays lower late-stage failure rates and speed up the creation of novel treatments.
