### **Stroke Post Processing Software Market Growth & Trends**

The global stroke post processing software market size is expected to reach USD 334.1 million by 2030, according to a new report by Grand View Research, Inc. It is expected to expand at a CAGR of 8.2% from 2022 to 2030. Stroke post processing software empowers physicians to make faster decisions related to stroke patients. The AI-powered software solutions enable earlier patient transfer processes. The adoption of AI-based stroke management solutions achieves better stroke treatment outcomes.

The COVID-19 pandemic impacted the market in the initial stage as many healthcare services were limited as there were high risks of spreading the virus. However, the market conditions recovered faster due to the sensitive nature of the stroke. Due to the availability of guiding post stroke management software, the frontline professionals are now capable of making better treatment-related decisions. Technological advancements have significantly increased the adoption of AI-driven stroke management software.

North America held the largest revenue share in 2021 due to the factors such as the rising prevalence of stroke cases in the region and supportive R&D investments to improve healthcare infrastructure. Asia Pacific is anticipated to grow at the fastest rate over the forecast period owing to the rising awareness regarding stroke, growing R&D in

manufacturing, and technological advancements in the region.

The growing use of artificial intelligence for the diagnosis and treatment of strokes is likely to bode well for the market. The development of newer solutions catering to patient data processing is likely to contribute to the market growth. The processed patient data can focus on a specific set of people at risk of developing diseases by identifying a disease pattern from the personalized data. Furthermore, the market players including the start-ups are relying on the implementation of strategies to attract investors. The market players can increase their outreach in developing countries by offering viable healthcare solutions, providing easier access to their products and services, and reducing digital challenges.
