Abstracts

The global structural heart procedures market size was estimated at USD 16.7 billion in 2025 and is projected to reach USD 36.4 billion by 2033, growing at a CAGR of 10.3% from 2026 to 2033. Key factors driving this market are the rising global prevalence of structural heart diseases and cardiovascular diseases, and the increasing demand for minimally invasive surgeries.

According to an Oxford Academic article published in January 2025, the global age-standardized prevalence of cardiovascular disease stands at approximately 7,179 cases per 100,000 individuals, highlighting the substantial and persistent global burden of heart-related conditions.

The section below outlines key market drivers such as increased awareness about structural heart diseases, rising prevalence of cardiovascular diseases. It reflects technological advancements, a shift towards rising adoption of minimally invasive interventions, and technological advancements driving precision and safety in structural heart procedures.
