Subcutaneous Drug Delivery Devices Market Growth & Trends

The global subcutaneous drug delivery devices market size is expected to reach USD 46.6 billion by 2027, expanding at a CAGR of 10.4%, according to a new report by Grand View Research, Inc. The increasing prevalence of chronic conditions combined with regular medicine administration to relieve disease symptoms has enhanced the demand for in-home drug administration devices. As per the Centers for Disease Control and Prevention (CDC), in 2018, about 54.4 million adults, amounting to 22.7% suffered from arthritis, fibromyalgia, gout, or lupus in the U.S. The CDC further stated that by 2040, an estimated 78.0 million adults accounting for 26.0% will be diagnosed with arthritis.

In addition, a rising number of biologic medicine approvals for the treatment of life-threatening conditions in patients requiring large dose volumes or extended delivery periods accelerate the demand for subcutaneous drug delivery devices. According to the study published by Informa U.K., in February 2019, the total number of medicines in the clinical trial pipeline increased from 53.0% in 2018 to 55.0% in 2019 for parenteral administrations, with an overall decrease in oral medicine formulations from 33.0% in 2018 to 31.0% in 2019.
