### Superconducting Wire Market Size & Trends

The global superconducting wire market size was estimated at USD 1.14 billion in 2023 and is estimated to grow at a CAGR of 9.0% from 2024 to 2030. Superconducting wire offers superior conduction of electricity with minimal losses making it a popular wire material for energy generation and critical applications. The growing demand for efficient power transmission is anticipated to boost the market over the forecast period.

Superconducting wires have several benefits when compared to copper wires, owing to the higher maximum current densities and zero power dissipation that it exhibits. They are widely used in superconducting magnets, which are used in scientific and medical equipment where high magnetic fields are necessary.
