Surgical Drainage Devices Market Growth & Trends

The global surgical drainage devices market size is anticipated to reach USD 2.57 billion by 2028, expanding at a CAGR of 5.6% over the forecast period, according to a new report by Grand View Research, Inc. The growth of this market is catapulted by the increasing incidence of chronic diseases, the need to curb healthcare expenditure, and the additional benefits associated with surgical drain devices. The majority of the time, these devices are used for the prevention of fluid accumulation and in post-surgical treatment & care.

With the escalating number of diseases that require surgical intervention, these devices are now being used in hospitals, clinics, and ambulatory surgical centers. Active surgical drain devices make use of negative pressure or vacuum to remove fluid buildup and are preferred over conventional passive drain devices as they help in healing the wound quickly.

Drainage devices are used in cardiothoracic surgeries, neurosurgical procedures, orthopedic surgeries, and abdominal surgeries among others. The global rise in musculoskeletal diseases, arthritis, and osteoporosis has resulted in an increase in the number of surgeries being performed, which has further led to an increase in the

adoption of these devices.

The North American region accounted for the largest market share due to technologically advanced medical infrastructure and the successful integration of ambulatory health services in its healthcare system. Emerging countries like India, China, and Brazil are also expected to flourish during the forecast period owing to their developing healthcare infrastructure and increasing adoption of advanced medical technology to curb chronic diseases.

Surgical Drainage Devices Market Report Highlights
