## **Abstracts**

### **Surgical Site Infection Control Market Summary**

The global surgical site infection control market size was estimated at USD 7.57 billion in 2024 and is expected to reach USD 16.22 billion by 2033, growing at a CAGR of 8.73% from 2025 to 2033. This growth is attributed to the growing number of surgical procedures being conducted globally, driven by the rising incidence of chronic illnesses such as cancer, cardiovascular diseases, and diabetes.

Moreover, heightened awareness among healthcare professionals and patients about the risks and complications of surgical infections has intensified the emphasis on patient safety and quality care. Innovations in technology, such as antimicrobial sutures, specialized wound dressings, and sterilization tools, are also enhancing the effectiveness of infection control strategies.
