### **Surgical Sphincteroplasty Market Growth & Trends**

The global surgical sphincteroplasty market size is expected to reach USD 2.67 billion by 2028, according to a new report by Grand View Research, Inc. The market is expected to expand at a CAGR of 6.6% from 2021 to 2028. Sphincteroplasty is a low-cost surgery as compared to other treatments anal incontinence. Factors such as low maintenance surgical tools and a 98.0% success ratio of sphincteroplasty have improved its adoption among surgeons.

The growing prevalence of anal incontinency (AI), increasing frequency of obstetric injury after childbirth, rise in innovative techniques to treat AI, and growing clinical studies are the key contributing factors propelling the growth of the market. Presence of fewer market players makes this a less competitive market. However, to strengthen their market position they are constantly involved in adopting developmental strategies like collaboration and acquisition with other market players.

Market leaders are also developing newer noninvasive surgical techniques for treating AI more effectively. Such initiatives are said to boost their market presence, fueling market growth. As a result of the COVID-19 pandemic, the healthcare system dealt with a lot of difficulties, such as the reduced impact of virus outbreaks, cancellation of

elective and interventional surgeries, and most chronic pain therapies that were considered non-urgent. The market, however, is projected to be back on track and grow more effectively, by mid-2022.
