U.S. Automotive Collision Repair Market Growth & Trends

The U.S. automotive collision repair market size is expected to reach USD 38.95 billion by 2030, registering a 0.8% CAGR from 2024 to 2030, according to a new study by Grand View Research, Inc. The market is expected to grow owing to the rising adoption of automotive technologies in automotive fabrication. The increasing use of 3D printing in applications such as automotive fabrication and prototyping has also led to the increased adoption of automotive collision repair services by automakers in the industry. Moreover, the growing focus of manufacturers on technology proliferation and increasing investments in research & development activities are also expected to contribute to market growth.

Increasing digitalization in automotive repair and maintenance services has transformed the U.S. market. Several startups are now offering online services for regular maintenance as well as for repairing of cars. For instance, Repair Pal, an auto repair and maintenance service app, offers repairing and pickup & drop services to users seeking assistance in case of car crashes, even in remote locations. These services enable users to get on-demand professional repair services at their homes or offices. Users are also given options to select their technicians based on the type of vehicle and repairing services required.

However, environmental concerns associated with the use of some of the repairing materials are hampering the market growth. For instance, paints and coatings contain high amounts of hazardous Volatile Organic Compounds (VOCs), which cause air pollution. This has led the U.S. government to set up regulations banning the use of hazardous paints and coatings. For instance, The U.S. EPA Design for Environment (DfE) Automotive Refinishing Partnership works in collaboration with auto repairing and refinishing shops to develop guidance documents and helpful checklists. Auto repairing and maintenance shops are obligated to follow these general health and safety checklists in their day-to-day operations to decrease the proportion of hazardous waste produces.
