### **UK Hysteroscopy Procedures Market Growth & Trends**

The UK hysteroscopy procedures market size is expected to reach USD 168.94 million by 2030, registering a CAGR of 7.41% from 2024 to 2030, according to a new report by Grand View Research, Inc. The growing adoption of technologically advanced devices and products for hysteroscopic procedures and the increasing competition among key players are the primary factors contributing to market growth. Companies operating in the industry, such as Medtronic, Hologic, Inc., and B. BRAUN MELSUNGEN AG, are developing novel devices and solutions that can be used in gynecological surgeries including hysteroscopy procedures.

The private and public organizations operating in the UK market are focusing on increasing awareness of gynecological conditions and treatment methods. They are conducting several workshops and events that can guide these procedures. For instance, in November 2021, the British Society for Gynecological Endoscopy (BSGE) conducted diagnostic and operative hysteroscopy workshops in Slough, England. The workshop aimed to develop hysteroscopy skills, and to become familiar with operative hysteroscopic equipment. It is appropriate for trainees in obstetrics and gynecology. Such efforts undertaken by various organizations to improve the knowledge and understanding of these procedures among healthcare professionals and the public are

anticipated to drive market growth.

Furthermore, major companies are expanding their product portfolio and focusing on improving the accessibility of these products. For instance, in September 2021, Hologic, Inc. launched its expanded Omni suite to optimize operative and diagnostic hysteroscopy in Europe, including the UK. This suite includes an Omni 30° hysteroscope. In addition, in October 2023, Hologic adopted the HystAR hysteroscopy simulator from Inovus Medical, a supplier of training technologies headquartered in the UK. This simulator offers surgeons a scalable and reproducible environment for hysteroscopy skills training. Thus, the adoption of technologically advanced products from key players is anticipated to boost market growth over the forecast period.
