### Ultomiris Drug Market Summary

The global ultomiris drug market size was estimated at USD 3.92 billion in 2024 and is projected to reach USD 18.03 billion by 2030, growing at a CAGR of 28.47% from 2025 to 2030. The global Ultomiris (ravulizumab) drug industry is experiencing strong momentum due to the rising demand for long-acting treatments in rare disorders.

Compared to its predecessor, Soliris, the drug's extended dosing interval offers convenience and improved patient compliance. This has increased preference among healthcare providers managing conditions such as paroxysmal nocturnal hemoglobinuria (PNH) and atypical hemolytic uremic syndrome (aHUS). Alexion reported that over 70% of PNH patients had transitioned to Ultomiris from Soliris in major markets, including the U.S. and EU. The transition from older complement inhibitors to ravulizumab contributes to overall market expansion.

Growth is further fueled by its expanding clinical utility across new indications such as generalized myasthenia gravis (gMG). For instance, in September 2022, Ultomiris received approval from the European Commission to treat adult patients with anti-acetylcholine receptor antibody-positive gMG, strengthening its position in the neurology segment.

The rising incidence of rare autoimmune and hematologic conditions is also a major factor driving demand for Ultomiris. Improved diagnostic tools and updated clinical guidelines have identified eligible patient populations earlier. For instance, in March 2024, the FDA granted priority review to Ultomiris for its potential use in treating neuromyelitis optica spectrum disorder (NMOSD), highlighting its pipeline strength. Strategic marketing efforts and partnerships by AstraZeneca and Alexion have helped expand awareness among clinicians and treatment centers. These combined elements shape a favorable environment for sustained revenue growth through 2030.
