Ultrasound Probe Disinfection Market Growth & Trends

The global ultrasound probe disinfection market size is expected to reach USD 700.3 million by 2027 registering a CAGR of 9.4%, according to a new report by Grand View Research, Inc. Increasing number of ultrasound imaging procedures, rising prevalence of nosocomial infections, and technological advancements are the key driving factors for the global market.

Nosocomial or Hospital-acquired Infection (HAI) is an infection acquired in healthcare facilities, such as hospitals, clinics, rehabilitation facilities, and Ambulatory Surgery Centers (ASCs). Factors, such as use of indwelling catheters, lack of proper hygiene in the healthcare setting, and excessive use of antibiotics, can increase the risk of HAIs in patients. Thus, it is very crucial to disinfect all the devices used in healthcare settings.

The increasing number of ultrasound imaging procedures across the globe is anticipated to increase the product demand over the forecast period. According to the report published by the U.S. Department of Health & Human Services, on any given day, approximately one in 31 patients suffers from at least one HAI. Similarly, the WHO reported that out of every 100 patients on any given day, ten in developing countries and seven in developed countries acquire at least one HAI. Ultrasound probe disinfection eliminates the risk of transmission of any pathogen from one patient to another, which is anticipated to boost the demand over the forecast period.

Ultrasound Probe Disinfection Market Report Highlights

In terms of revenue, consumables are anticipated to witness the fastest growth over the forecast period as these are usually disposable and need to be bought frequently

Intermediate and low-level disinfection held the largest market share in 2019 and is anticipated to witness a significant growth rate over the forecast period

Hospitals and clinics end-use segment held the largest market share in 2019 owing to the rising number of ultrasound imaging procedures performed in these healthcare facilities

Asia Pacific is expected to be the fastest-growing regional market over the forecast period owing to the increasing usage of diagnostic imaging
