U.S. Anti-snoring And Snoring Surgery Devices Market Growth & Trends

The U.S. anti-snoring devices and snoring surgery market is projected to reach USD 802.9 million by 2030, according to a new report by Grand View Research, Inc. The market is anticipated to register a significant CAGR of 6.5% over the forecast period. The ever-rising incidence of snoring issues and sleep apnea is propelling the growth of the U.S. anti-snoring devices and snoring surgery market. Moreover, the increasing focus of market players to introduce new products that are technologically advanced is also expected to drive market growth in the forecast period.

The COVID-19 pandemic led to the shutting down of various economic activities and changes in healthcare priorities as well. The huge influx of COVID-19 patients admitting to hospitals led healthcare professionals entirely dedicate their service towards it. This resulted in a fall in the number of elective surgeries which has negatively impacted the anti-snoring devices and snoring surgery market.

In addition, the reduced number of hospital visits caused a drop in the number of prescriptions for anti-snoring devices. However, with the condition coming under control and various steps taken by the government to control the spread of the virus and reduce the mortality rate helped the market to recover quickly. Furthermore, with the launch of

new products and a growing obesity rate the market is expected to gain significant growth over the forecast period.

U.S. Anti-snoring Devices And Snoring Surgery Market Report Highlights

Oral appliances/mouthpieces segment dominated the type segment in 2022 owing to easy availability and increasing adoption of these products

EPAP therapy devices held the second-highest market share owing to increasing product launches

The COVID-19 pandemic had a slight negative impact on the market due to reduced patient visits and a fall in the number of elective surgeries carried out
