U.S. Burn Care Centers Market Growth & Trends

The U.S. burn care centers market size is expected to reach USD 10.2 billion by 2030, according to a new report by Grand View Research, Inc. It is expected to expand at a CAGR of 3.6% from 2022 to 2030. The rising number of burn-related injuries is aiding the market growth. As per the data of the WHO, annually, about 500,000 patients were treated under emergency services in the U.S. The increasing number of treatment centers and facilities in the country owing to the increasing preference of patients for more personalized care and value-based services as compared to the general health services is bolstering the growth. Moreover, the introduction of advanced treatment options such as skin graft wound debridement, and reconstructive surgery is expected to increase industry growth in the forecast years.

Growing awareness initiatives by government organizations such as the WHO and nonprofit organizations are also expected to fuel market growth in the coming future. These initiatives increase the number of injured patients seeking treatment from either in-hospital care units or standalone units owing to the increased awareness about injuries and commercial availability of effective treatments. This is expected to fuel the growth in the U.S.

Long in-hospital stays, multiple operating procedures, along with the requirements of

expensive equipment make it a cost-intensive area. In addition, the growing demand for hygienic infection control areas for any burn care unit makes them quite expensive, which negatively affects market growth.
