U.S. Collagen Market Growth & Trends

The U.S. collagen market size is anticipated to reach USD 4.94 billion by 2030, expanding at a CAGR of 11.2% from 2023 to 2030, according to a new report by Grand View Research, Inc. The growth is attributed to high demand from end-use sectors including food & beverage and the healthcare & pharmaceutical industry.

There are various benefits associated with the product that may influence its market growth including skin hydration, wrinkles reduction, a slow aging process, making bones denser, and assisting in muscle development. In addition, the market is expected to benefit from the increasing adoption of collagen-based products due to superior characteristics such as gelling, emulsification, and binding of the food products.

Gelatin, which is used in a variety of pharmaceutical products such as capsules and drug delivery instruments, is expected to benefit market growth across the country. The increasing need for supplements to correct nutritional deficiencies and maintain an adequate intake of nutrients is also expected to positively impact the demand for the product.

With increased supplement sales, COVID-19 had a positive impact on the market. The population preferred an enriched diet with vitamins, proteins, and micronutrients to

optimize their immune system. It is one of the supplements that help in the upkeep of the human body's protein levels. Taking the current lifecycle into account, the amount of collagen produced in the human body is relatively low. As a result, people have begun to choose supplements, which has increased the product demand in the U.S.

U.S. Collagen Market Report Highlights

Poultry source has been witnessed as the fastest growing type segment with a CAGR of 12.2% on the account of the increasing use of chicken collagen to treat joint problems

The food and beverage segment is the fastest-growing application segment with a CAGR of 11.5% in terms of revenue during the 2018-2030 forecast period. This is attributable to the increasing consumption of collagen-based functional foods including sports energy bars, powders, butter, margarine, oatmeal, cereals, and wellness shots among others

The demand for hydrolyzed collagen is expected to register significant growth with a CAGR of 11.7% due to surging utilization in the food processing industry for the production of confectionery such as hard candies and chocolates

In January 2021, GELITA AG added a new product to its product range called IMMUPEPT. It offers the benefits of collagen peptides to the immune health category. The product is designed to stimulate keratinocytes and fibroblasts. This strategic initiative was taken to broaden their product portfolio
