Abstracts

The U.S. emergency department market size was estimated at USD 216.13 billion in 2025 and is expected to reach USD 343.59 billion by 2033, growing at a CAGR of 6.02% from 2026 to 2033. Key market growth drivers include the growing burden of chronic diseases such as cardiovascular conditions, diabetes, and respiratory illnesses, which often lead to acute episodes requiring immediate intervention.

In addition, many patients continue to rely on emergency departments as a primary access point due to shortages of primary care providers, limited after-hours services, and barriers to timely outpatient care. Moreover, supportive government initiatives and healthcare policies aimed at improving emergency care infrastructure and reducing patient wait times also drive the market growth.
