### U.S. Endoscope Cleaning Timers Market Growth & Trends

The U.S. endoscope cleaning timers market size is anticipated to reach USD 201.17 million by 2030 and is projected to grow at a CAGR of 5.82% from 2025 to 2030, according to a new report by Grand View Research, Inc. The market is expected to experience substantial growth due to the rising occurrence of gastrointestinal disorders and cancers, which require a greater number of endoscopic examinations. This, in turn, drives the need for efficient cleaning solutions to avoid infections linked to these procedures. Furthermore, the increasing preference for minimally invasive surgeries, adherence to regulatory standards, advancements in cleaning technologies, higher healthcare spending, and a strong emphasis on infection control strategies are also contributing factors to market expansion.

Patients increasingly prefer endoscopic procedures because of their advantages, including shorter recovery times and reduced pain in comparison to traditional surgical methods. According to the U.S. Department of Health and Human Services, over 20 million gastrointestinal endoscopies are conducted annually in the U.S. As the demand for these procedures rises, there is an increasing necessity for dependable cleaning protocols to ensure the safety and effectiveness of endoscopic tools.

Moreover, technological advancements in automated cleaning systems have greatly fueled market expansion. Contemporary automated endoscope reprocessors (AERs) frequently feature built-in timers that boost operational efficiency by ensuring that every stage of the cleaning process is finished within designated time limits. This integration of technology not only enhances compliance but also minimizes human error during the reprocessing phase.

## U.S. Endoscope Cleaning Timers Market Report Highlights

The 1-hour cleaning timers segment led the market with the largest revenue share of 64.1% in 2024 and is expected to grow at the fastest CAGR during the forecast period.

The 5/7-day cleaning timers segment is expected to grow at a significant CAGR during the forecast period. 5/7-day cleaning timers monitor the duration an endoscope remains in storage after undergoing high-level disinfection (HLD).
