### U.S. Fencing Market Growth & Trends

Several technologies are used in fencing, and one such technology is the electric security fencing system which is a form of wired barrier that deters animals and people from breaching a border by using electric shocks. These systems may also be used to protect agricultural fields from other unanticipated dangers. Furthermore, the wires immediately trigger an alert, which is sent to the security officers stationed in the nearby locality.

This distribution network for fencing in the U.S. is extensive and competitive. To maintain leadership, dominant companies have turned to merger and acquisition strategies.
