### **U.S. Gynecological Chairs And Tables Market Growth & Trends**

The U.S. gynecological chairs and tables market is anticipated to reach USD 283.8 million by 2030 and is anticipated to expand at a CAGR of 6.5% during the forecast period, according to a new report by Grand View Research, Inc. The expansion of the U.S. gynecological chairs and tables industry is largely attributed to the growing adoption of minimally invasive surgical (MIS) techniques in gynecology, which requires specialized equipment to enhance procedural efficiency and patient comfort. MIS procedures have gained significant popularity in the U.S. due to their advantages over traditional open surgeries, such as reduced postoperative pain, shorter hospital stays, and quicker recovery times. In gynecology, procedures like laparoscopic hysterectomies and myomectomies are increasingly performed using MIS techniques, driven by technological advancements and a heightened focus on patient-centered care.

The Society for Women's Health Research reports that approximately 26 million women in the U.S., aged 15 to 50, are affected by uterine fibroids, leading to a substantial demand for laparoscopic procedures. Additionally, a study published in the International Journal of Women's Health indicates that the prevalence of uterine fibroid disease varies between 5.4% and 23.6%, depending on the age group. Furthermore, the Office

on Women's Health notes that fibroids develop in approximately 20% to 80% of women by the age of 50. This substantial patient population has led to an increased demand for laparoscopic procedures.

The rising preference for MIS in gynecology directly impacts the need for specialized chairs and tables designed to accommodate these advanced procedures. These equipment pieces are engineered to provide optimal patient positioning, facilitate surgeon access, and integrate seamlessly with imaging and robotic systems. As MIS becomes more prevalent, healthcare facilities are investing in state-of-the-art gynecological chairs and tables to enhance procedural outcomes and patient safety.

### U.S. Gynecological Chairs And Tables Market Report Highlights

Based on product, gynecological chairs dominated the U.S. market share, while the gynecological tables segment is projected to expand at a steady CAGR. This growth is fueled by high procedure volumes in OB/GYN facilities and a rising emphasis on women's health and routine pelvic examinations.

Based on application the pelvic surgery segment held a notable share of the market, while the urology surgery segment is projected to grow at the fastest CAGR of 8.1%, driven by rising urological procedures and technological advancements.

Based on end use, the office-based surgery (OBS) segment contributed notably to market revenue. The Department of Veterans Affairs (VA) segment is projected to experience the fastest growth rate. This reflects rising investments in VA facilities and increased surgical procedure volumes.
