U.S. Medical Lifting Sling Market Growth & Trends

The U.S. medical lifting sling market size is anticipated to reach USD 457.1 million by 2030, expanding at a CAGR of 7.2% from 2024 to 2030, according to a new report by Grand View Research, Inc. The market is driven by factors such as the rapid growth in the aging population, government policies that promote safe patient handling practices, increasing incidences of lifestyle diseases, and the high recovery cost of injuries.

The aging population is expanding rapidly due to improved healthcare and longer life expectancy. To address the rising healthcare costs, there is a need to reduce healthcare spending. This need is driven by factors such as the growing demand for healthcare services and the increasing expenditure on healthcare. The U.S. population aged 65 years and above is estimated to reach from 58 million in 2022 to 82 million by 2050, which represents an increase of 47%. Changing lifestyles, including poor dietary habits and lack of physical activity, have contributed to the rising prevalence of chronic diseases and lifestyle-related conditions.

Slings are introduced to reduce the burden of lifting in hospitals and reduce healthcare injuries during patient handling. It helps prevent any worsening of injuries, safely lifts patients of any weight, and provides the right assistance. It is most commonly used for

seniors and people with musculoskeletal disorders and limited mobility. They could be assisted with wheelchairs and used along with other service substitutes.
