Abstracts

The U.S. small animal endoscopes & endoscopic instruments market size was valued at USD 59.2 million in 2025 and is projected to grow from USD 62.2 million in 2026 to USD 94.2 million by 2033, at a CAGR of 6.1% from 2026 to 2033. The market is growing due to factors such as rising foreign body ingestion, enteropathy cases, growing chronic GI, respiratory, and urogenital disorders, increasing adoption of minimally invasive procedures, and expanding specialty and referral care infrastructure.

The growth is further supported by technological advancements in imaging systems, expanding specialty veterinary hospitals, increasing prevalence of gastrointestinal and respiratory disorders, and growing awareness of early disease diagnosis, although high equipment costs and reprocessing requirements remain key challenges.
