## **Abstracts**

The U.S. solid waste management market size was estimated at USD 156.3 billion in 2024 and is projected to reach USD 247.5 billion by 2033, growing at a CAGR of 5.3% from 2025 to 2033. The growth is fueled by increasing urbanization, industrialization, and rising consumer waste.

As population density rises and consumption patterns shift, municipal and industrial waste volumes are growing, requiring more advanced and efficient waste handling systems. Strict environmental regulations from agencies like the EPA are pushing municipalities and private players to invest in sustainable waste practices, including waste-to-energy, recycling, and composting solutions.

Technological advancements such as smart bins, AI-powered optical sorters, and automation are improving operational efficiency and accuracy in waste segregation and material recovery. Public awareness around environmental protection and circular economy practices is also influencing both policy and consumer behavior, driving demand for better waste management infrastructure.
