## Abstracts

The U.S. veterinary eye care services market size was estimated at USD 2.59 billion in 2024 and is projected to reach USD 5.12 billion by 2033, growing at a CAGR of 8.23% from 2025 to 2033. The market is propelled by rising pet ownership and humanization of pets, increasing incidence of eye disorders in pets, and the growth of pet insurance and financial support for specialized care.

The growing number of pets in the U.S. increases demand for specialized healthcare services, including ophthalmology. According to the American Veterinary Medical Association report of 2024, the total number of U.S. households owning dogs is 59.8 million, and that of cats is 42.2 million. As more households adopt dogs and cats, veterinarians encounter a higher incidence of eye-related conditions such as cataracts, glaucoma, and retinal diseases. This surge in cases directly drives the need for advanced diagnostic and treatment facilities. Hence, veterinary clinics and specialty centers are expanding ophthalmology services, investing in equipment like slit lamps, tonometers, and surgical lasers.

Furthermore, the prevalence of ocular diseases in pets, including glaucoma, cataracts, and retinal degeneration, has risen due to aging pet populations and genetic predispositions in certain breeds. Cataracts and lenticular sclerosis are among the most common ocular conditions in dogs, particularly as they age. According to a report of Cornell University College of Veterinary Medicine, approximately 75-80% of diabetic dogs develop cataracts within the first year of diagnosis. It progresses rapidly and

frequently leads to severe lens-induced uveitis, which can cause secondary glaucoma.

Similarly, according to the VCA animal hospitals report, age-related eye disorders are also prevalent, in which 50% of dogs above 9 years develop cataracts or lenticular sclerosis, with the incidence rising to nearly 100% in dogs above 13 years. Higher disease incidence creates a direct need for diagnostic, surgical, and treatment services, increasing patient volume for veterinary eye care providers. These rising incidences of ocular diseases compel clinics to expand ophthalmology services, adopt advanced treatment technologies, and train specialized staff.
