Abstracts

The global vacuum pump market size was estimated at USD 6,637.4 million in 2025 and is projected to reach USD 9,671.7 million by 2033, growing at a CAGR of 5.1% from 2026 to 2033. Market growth is attributed to increasing demand from industries such as semiconductor manufacturing, pharmaceuticals, chemicals, food processing, and electronics.

These sectors rely on vacuum pumps for processes like material handling, packaging, drying, and contamination control. As production volumes expand and quality requirements become stricter, the need for reliable and efficient vacuum systems continues to rise, supporting market growth.

The market is also being shaped by evolving industry requirements around energy efficiency, sustainability, and total cost of ownership. End users are increasingly prioritizing systems that offer lower power consumption, reduced maintenance needs, and longer operational lifespans. This has accelerated the shift toward dry vacuum technologies, particularly in industries such as semiconductors and pharmaceuticals, where oil contamination is a critical concern.
