Veterinary Care Market Growth & Trends

The global veterinary care market size is expected to reach USD 114.4 billion by 2028, registering a CAGR of 5.4% over the forecast period, according to a new report by Grand View Research, Inc. Increasing number of government initiatives to safeguard food security is likely to boost the adoption of better veterinary care worldwide. A significant increase in pet adoption and humanization worldwide is mostly responsible for the high need for veterinary care, which is boosting the market growth.

Moreover, the COVID-19 pandemic resulted in increased adoption of pets. In June 2020, at the Society for the Prevention of Cruelty to Animals Los Angeles, pet adoptions were double their normal rate, with almost 10 or 13 adoptions a day. Furthermore, a waiting list had formed for certain types of canines and puppies, as so few were left. Increasing awareness among pet owners for regular check-ups of their pets is further boosting the market.

The demand for animal protein is growing across the globe owing to higher per capita income. According to the article OECD-FAO Agricultural Outlook 2020-2029, growth in consumption of meat in the next decade is expected to increase by 12% by 2029. As the demand for meat continues to increase, the demand for veterinary care is anticipated to grow rapidly. Key companies in the market are collaborating with animal

welfare organizations to encourage awareness and advance veterinary healthcare, which is further bolstering the market growth.

Veterinary Care Market Report Highlights

Companion animals held the dominant share in the animal type segment owing to increasing pet healthcare expenditure and increasing pet adoption

The production animals segment is expected to register the fastest CAGR over the forecast period due to increasing government initiatives to improve livestock health

Moreover, rising domestic production, consumption, and export of bovine meat is boosting the segment growth

Regular care type, for both production & companion animals, dominated the global market in 2020 due to the increased pet ownership, government initiatives to prevent various animal diseases, and a high number of veterinary hospitals & clinics
