Abstracts

The global veterinary rehabilitation market size was estimated at USD 1.4 billion in 2025 and is projected to reach USD 3.1 billion by 2033, growing at a CAGR of 11.1% from 2026 to 2033. The market is growing due to the rising incidence of mobility issues, injuries, and chronic conditions such as osteoarthritis in companion and production animals.

Increasing pet humanization is encouraging owners to spend more on advanced recovery therapies, such as physiotherapy and hydrotherapy. In addition, a higher number of surgical procedures in animals is driving demand for post-operative rehabilitation products and services.

Technological advancements and increasing adoption of advanced, non-invasive treatment solutions are crucial factors driving the global market. As pet owners and veterinarians increasingly prefer therapies that offer faster recovery, reduced pain, and minimal side effects, the demand for innovative rehabilitation devices continues to rise. In addition, the growing focus on improving clinical outcomes and expanding treatment capabilities within a single platform is further accelerating market expansion.

For instance, in February 2025, Fotonmedix's Vetmedix high-power veterinary laser received certification from the U.S. Food and Drug Administration, which highlights a significant technological milestone. The device's ability to combine laser surgery and rehabilitation therapy, along with features such as deeper tissue penetration and multi-

condition treatment, enhances its clinical utility and adoption across veterinary practices. Such innovations improve treatment efficiency and strengthen global market penetration, thereby contributing to the overall market growth.

Moreover, rising innovation in veterinary orthopedic procedures and the growing demand for more precise, effective surgical outcomes further contribute to the market growth. As veterinarians increasingly seek advanced tools that improve surgical accuracy, reduce complications, and enhance post-operative recovery, the adoption of specialized implants and instruments continues to grow, ultimately supporting better rehabilitation outcomes and faster animal recovery.

For instance, according to an article published by AO Foundation, in March 2024, innovations by AO VET include advanced solutions such as anatomically contoured osteotomy plates, locking implant systems for small animals, and precision-guided surgical tools like screw targeting clamps. These technologies improve fracture management, enable treatment of complex orthopedic conditions, and enhance surgical efficiency. Such advancements increase the success rate of orthopedic procedures and drive the need for post-surgical rehabilitation services, thereby significantly contributing to the market growth.

In addition, the rising incidence of limb loss, injuries, and mobility impairments in dogs, along with increasing pet humanization and willingness to spend on advanced care, further supports the market growth. For instance, according to an article published by The Roch Society, in July 2025, innovations in canine prosthetics like OrthoPets and Bionic Pets are enabling customized solutions such as 3D-printed limbs and mobility aids that restore movement and improve quality of life. These advanced devices require proper fitting, follow-up care, and structured rehabilitation therapies, thereby increasing demand for veterinary rehab devices.
