Abstracts

The global video processing platform market size was estimated at USD 7.73 billion in 2024 and is projected to reach USD 19.35 billion by 2033, growing at a CAGR of 10.9% from 2025 to 2033. The market growth is driven by various factors such as rising OTT and live-streaming demand, cloud-based deployment adoption, increasing use of AI-driven video analytics, rapid growth in short-form content, and enterprises' focus on improving video quality, personalization, and viewer experience.

The global video processing platform industry's growth is primarily driven by the exponential growth in online video consumption across OTT, social media, and live-streaming platforms. Increasing internet penetration, the surge in mobile device usage, and higher network bandwidth have significantly expanded the reach of high-quality video content. Additionally, the growing shift toward digital entertainment and remote communication has accelerated the demand for scalable, cloud-based video processing solutions. Businesses are adopting these platforms to ensure seamless video delivery, adaptive bitrate streaming, and efficient content distribution across multiple devices and geographies, thereby enhancing user experience and optimizing content monetization.

Technological advancements such as Artificial Intelligence (AI), Machine Learning (ML), and edge computing are transforming the video processing landscape. AI-enabled tools help automate video editing, content tagging, compression, and real-time analytics, enabling faster and more efficient workflows. Edge computing allows processing closer to the data source, reducing latency and bandwidth consumption. Moreover, the

increasing integration of video analytics and Quality-of-Experience (QoE) monitoring tools helps enterprises optimize performance and understand viewer behavior. These innovations collectively drive the adoption of intelligent, real-time video processing platforms across industries, including media, e-commerce, and education.

Another key growth driver is the rising enterprise focus on content personalization and security. Video processing platforms are increasingly used to deliver customized viewing experiences through AI-driven recommendation engines and adaptive streaming technologies. The growing need for content protection, digital rights management (DRM), and secure video transmission has further fueled platform adoption among enterprises and service providers. In addition, industries such as healthcare, BFSI, and education are leveraging video platforms for remote consultations, training, and communication. The combination of scalability, automation, and data-driven insights continues to make video processing platforms an essential part of digital transformation strategies globally.
