Abstracts

The global virtual desktop infrastructure market size was valued at USD 22.5 billion in 2025 and is projected to grow from USD 26.3 billion in 2026 to USD 85.3 billion by 2033, at a CAGR of 18.3% from 2026 to 2033. North America dominated the market, accounting for a revenue share of 32.5% in 2025. The continued adoption of hybrid and remote work across the globe is driving demand for VDI solutions. Organizations use VDI to centralize desktop environments, simplify IT management, support diverse devices, and maintain consistent user experiences across distributed workforces.

The increasing adoption of Bring Your Own Device (BYOD) policies is driving demand for Virtual Desktop Infrastructure (VDI) solutions. Organizations allow employees to use personal laptops, tablets, and smartphones for work, creating challenges related to data security, device management, and application access. VDI addresses these concerns by hosting desktops and applications centrally while allowing users to access them remotely through authorized devices. Sensitive business data can remain within the organization’s controlled infrastructure rather than being stored directly on personal devices. This approach enables IT teams to enforce security policies, manage user access, and monitor desktop environments centrally. As flexible work practices expand, VDI provides enterprises with a scalable and secure way to support BYOD while maintaining productivity and operational control.
