Wafer Level Packaging Market Size & Trends

The global wafer level packaging market size was estimated at USD 7.56 billion in 2023 and is expected to grow at a CAGR of 10.2% from 2024 to 2030. Increasing demand for the technologically improved mobile devices and ongoing advancements in integrated circuits and semiconductor industry is expected to accelerate the growth of wafer layer packaging market during the forecast period.

In addition, rising demand for smaller and more compact electronic devices in established and emerging economies is shaping the dynamics of the wafer layer packaging market. Hence, as consumer electronics, automotive, and healthcare industries continue to demand smaller and more compact devices, wafer level packaging offers a solution by enabling the miniaturization of electronic components, leading to enhanced performance and functionality. For example, the rise of wearables such as smartwatches and fitness trackers has fueled the demand for wafer level packaging as it allows for the integration of multiple functions into a single compact chip.

Furthermore, the escalating adoption of Internet of Things (IoT) devices across various industries. The IoT ecosystem requires advanced packaging solutions

to accommodate the diverse range of sensors, microcontrollers, and wireless communication modules in a compact form factor. Wafer level packaging facilitates the integration of multiple components onto a single chip, enabling the development of smaller, more power-efficient IoT devices. For instance, in the automotive sector, the proliferation of connected car technologies and advanced driver assistance systems (ADAS) has led to an increased need for wafer level packaging to enable the seamless integration of sensors and processors in a compact space.

Moreover, the continuous advancements in semiconductor technology, including the development of advanced packaging techniques such as fan-out wafer level packaging (FOWLP) and through-silicon vias (TSV), are driving the growth of the wafer level packaging market. These innovations have enabled increased functionality, improved performance, and reduced form factors, making wafer level packaging an attractive solution for manufacturers seeking to stay ahead in the competitive electronics market.
