Abstracts

The global white hydrogen market size was estimated at USD 4.26 billion in 2025 and is projected to reach USD 8.81 billion by 2033, growing at a CAGR of 9.6% from 2026 to 2033. White hydrogen, also known as naturally occurring or geologic hydrogen, is gaining significant attention as a low-carbon energy resource that requires minimal processing compared to conventional hydrogen production methods.

Growing global emphasis on energy transition, decarbonization strategies, and diversification of hydrogen supply sources is accelerating exploration activities and technological advancements in natural hydrogen extraction.

The white hydrogen industry is seeing increased investment from energy companies and governments to identify commercially viable reserves in ultramafic rock formations, hydrothermal systems, and tectonic zones. Advancements in subsurface imaging, drilling technologies, and reservoir modeling are improving the economic feasibility of natural hydrogen projects, positioning white hydrogen as a promising complement to green and blue hydrogen pathways.

In addition, the rising demand for clean fuel across industrial feedstock, mobility, and power generation applications is expected to support long-term market expansion. As industries seek cost-competitive alternatives to electrolytic hydrogen, naturally occurring hydrogen offers the potential for lower production costs and reduced lifecycle emissions, strengthening its strategic importance in the evolving global hydrogen

economy.
