Abstracts

The global wireless connectivity market size was valued at USD 110.2 billion in 2025 and is projected to grow from USD 121.2 billion in 2026 to reach USD 307.9 billion by 2033, at a CAGR of 14.2% from 2026 to 2033. North America dominated the market, accounting for the largest revenue share of 34.9% in 2025. The growth can be attributed to the rapid adoption of IoT devices, smart technologies, connected vehicles, and wireless-enabled consumer electronics across industries.

The rapid expansion of connected devices across consumer electronics, smart homes, industrial facilities, healthcare, automotive, and energy applications is a significant driver of the global wireless connectivity market. The growing deployment of sensors, wearables, connected appliances, industrial equipment, and IoT endpoints is increasing demand for connectivity technologies such as Wi-Fi, Bluetooth, Zigbee, Thread, NFC, and cellular connectivity. As organizations increasingly connect physical assets to collect real-time data and enable remote monitoring, the need for reliable, low-power, and scalable wireless connectivity solutions continues to expand.

Increasing adoption of smart home and building technologies is creating sustained demand for wireless connectivity components and modules. Smart lighting, security systems, thermostats, appliances, access-control systems, energy-management equipment, and entertainment devices increasingly rely on wireless communication to

provide centralized control and interoperability. The growing emphasis on energy efficiency, automation, and remote management is also encouraging businesses and consumers to deploy connected building infrastructure, supporting demand for Bluetooth, Wi-Fi, Zigbee, Z-Wave, Thread, and other short-range wireless technologies.
