Wollastonite Market Summary

The global wollastonite market size was estimated at USD 362.0 million in 2025 and is projected to reach USD 711.0 million by 2033, growing at a CAGR of 8.8% from 2026 to 2033. The growth of the market is primarily driven by rising demand from the ceramics industry, where wollastonite is extensively used in tiles, sanitaryware, and ceramic glazes.

Wollastonite is a naturally occurring calcium silicate mineral widely used in ceramics, plastics, paints, construction materials, and automotive applications due to its reinforcing and thermal stability properties. Its low moisture absorption, thermal stability, and ability to improve mechanical strength make it a preferred mineral additive in ceramic manufacturing. Rapid urbanization and increasing residential and commercial construction activities across the Asia Pacific, the Middle East, and Latin America are significantly boosting the consumption of ceramic grades, thereby supporting the market demand.

The increasing use of the mineral in plastics and polymers is another major factor accelerating market growth. Manufacturers are incorporating wollastonite as a functional filler in thermoplastics and engineering plastics to enhance dimensional stability, impact resistance, and heat resistance while reducing gradeion costs. The growing automotive and electrical industries are driving strong demand for lightweight, durable plastic

components, further supporting the adoption of wollastonite in polymer applications.

The paints and coatings industry is contributing substantially to the expansion of the market due to the mineral's ability to improve corrosion resistance, weatherability, and coating durability. Wollastonite also enhances pigment performance and reduces cracking in industrial coatings. Rising infrastructure investments, increasing industrial maintenance activities, and expanding construction projects worldwide are driving the consumption of advanced paints and protective coatings, thereby increasing the utilization of wollastonite.

Growing infrastructure development and cement gradeion are further supporting market growth, as wollastonite is increasingly used in construction materials to improve strength and reduce shrinkage. Governments across developing economies are investing heavily in transportation infrastructure, smart cities, residential housing, and commercial complexes, leading to higher demand for cementitious grades and reinforced building materials. This trend is particularly prominent in rapidly industrializing economies such as India and China.
