Abstracts

The global wound closure strips market size was estimated at USD 1.35 billion in 2025 and is projected to reach USD 2.16 billion by 2033, growing at a CAGR of 6.01% from 2026 to 2033. The industry is primarily driven by the rising number of surgical procedures and the increasing incidence of trauma and minor injuries that require quick and effective wound management.

The growing preference for non-invasive closure methods, along with the expanding elderly population and the higher prevalence of conditions such as Diabetes Mellitus, further supports demand. In addition, the ease of use and suitability for home healthcare settings continue to accelerate market adoption.

The increasing prevalence of acute wounds such as cuts, lacerations, and abrasions is expected to boost the need for wound closure strips. Many individuals experience preventable acute injuries. According to the data published by the National Safety Council in April 2024, approximately 63 million individuals - around 1 in 5 - sought medical attention for an injury. Thus, the large number of patients is anticipated to boost the demand for wound closure strips in the coming years. For instance, based on data published by TRADEBASE OR ITS AFFILIATES in February 2023, approximately 30% of all workplace injuries involve cuts or lacerations. Wound closure strips are commonly used to treat acute injuries such as cuts, lacerations, and abrasions. As a result, the

high number of acute wound cases is expected to increase the demand for wound closure strips.

The rising incidence of trauma cases, including road accidents, sports injuries, and workplace cuts, is a key factor driving the wound closure strips market. These injuries often involve minor to moderate lacerations where closure strips provide a quick, non-invasive solution for wound management. Their ease of application and effectiveness in reducing scarring make them widely used in emergencies and outpatient settings.

Furthermore, the increasing number of road accidents and the rising incidence of injuries are expected to drive the demand for wound closure strips in the upcoming years. According to data published in the Annual Report on Road Accidents in India-2022, a total of 461,312 road accidents were recorded by States and Union Territories (UTs) in 2022, resulting in injuries to 443,366 individuals. This indicates a 15.3% increase in injuries and an 11.9% rise in accidents compared to the previous year. Wound closure strips can effectively treat minor lacerations and cut wounds sustained during road accidents. As a result, the surge in road accidents is expected to lead to a significant increase in injuries, consequently boosting the demand for wound closure strips.

Moreover, the benefits of wound closure strips are expected to drive their demand over the forecast period. Some advantages of wound closure strips include high patient comfort, excellent cosmetic results, ease of application, faster healing, reduced risk of infection and damage caused by stitches, and the absence of the need for local anesthetic.

The rising number of surgical procedures, ranging from minimally invasive procedures to major operations, has significantly increased demand for efficient wound management solutions, such as wound closure strips. These strips are widely preferred for post-surgical incision care due to their ease of application, reduced risk of infection, and ability to support faster healing with minimal scarring.
