Abstracts

The global x-ray security screening market is expected to reach USD 2.89 billion by 2020. Threats pertaining to piracy, drug trade, cross-border terrorism, human trafficking, etc., are anticipated to fuel global x-ray security screening market demand over the forecast period. The risk of terrorist attack has driven investment in the aviation security. Further, illegal arms, drug trafficking and immigration have heightened border security, which is expected to favorably impact the demand for body & baggage screening systems and explosive detection systems.

The sales of x-ray security and inspection systems significantly rely on the decision of governmental agencies to upgrade or expand existing border crossing inspection sites, airports, seaport inspection sites, military facilities, and other security installations. The decision of governmental agencies to incorporate new systems or to upgrade existing infrastructure plays an important role in driving market demand. Further, the aviation sector has to keep pace with evolving travel environment by adopting several security measures, which is expected to drive the x-ray security screening market over the next few years. Development of flexible security screening systems in order to address terror threats is also anticipated to fuel market demand. In addition, upgrades for existing installations provide opportunities for market growth. However, ionizing radiations generated by x-ray security scanners are known to be carcinogenic, and may hinder market growth over the forecast period.

Further key findings from the study suggest:

The transit sector is poised for high growth over the forecast period. X-ray security screening systems are primarily used for baggage screening, and account for substantial usage across the civil aviation sector.

X-ray security screening exhibits high penetration in the government sector, and accounted for substantial market share in 2013. Upgrades for existing installations are expected to drive the regional market demand, particularly across the border security application. The decision of governmental agencies to incorporate new systems or to upgrade existing infrastructure plays an important role in driving market demand.

Product screening accounted for considerable market share in 2013, with significant demand originating from the cargo and baggage screening applications.

North America accounted for a sizable share of the global x-ray security screening market in 2013. The Homeland Security Department has invested heavily in U.S. customs and border security, which is expected to catapult the segment demand over the forecast period.

A few key industry participants, including OSI Systems (Rapiscan), Smiths Detection, American Science and Engineering, Morpho Detection and Analogic Corporation are constantly innovating with considerable R&D investments to gain competitive advantage, and maintain strong market position.

For the purpose of this study, Grand View Research has segmented the global x-ray security screening market on the basis of end-use, application and region:
