### SUMMARY

A book paper (or publishing paper) is a paper that is designed for the publication of printed books, magazines and so on. Traditionally, book papers are off-white or low-white papers (easier to read), are opaque to minimise the show-through of text from one side of the page to the other, and are (usually) made to tighter caliper or thickness specifications, particularly for case-bound books. Typically, books papers are light-weight papers 60 to 90 g/m<sup>2</sup> and often specified by their caliper/substance ratios (volume basis). For example, a bulky 80 g/m<sup>2</sup> paper may have a caliper of 120 micrometres (0.12 mm) which would be Volume 15 (120?10/80), whereas a low bulk 80 g/m<sup>2</sup> may have a caliper of 88 micrometres, giving a volume 11. This volume basis then allows the calculation of a book's PPI (printed pages per inch), which is an important factor for the design of book jackets and the binding of the finished book.
