SUMMARY

As a kind of hardwood flooring which is widely used, engineered wooded flooring is composed of two or more layers of wood in the form of a plank. Engineered wooded flooring is comprised of two parts: core wood layers and a top hardware layer known as the lamella. The core core layers are made up of 3-12 HDF, softwood or plywood sheets which are bonded together at 90 degree angles to form a sandwich base. The top layer is the wood that is visible when the flooring is installed and is adhered to the core. The lamella might be oak, walnut, maple or an alternative hardwood species that provides the aesthetic appeal.
