SUMMARY

Ethanolamines are a multifunctional family of amino alcohols favored for a diverse range of applications. They are produced commercially by reacting ethylene oxide with ammonia. They are hygroscopic and miscible with water, most alcohols, and polyols. As alkalines, they react with acids to form esters or salts. Their versatile properties qualify them for industrial use as absorbents for gas treating; as emulsifiers in cleaning products; and as a corrosion inhibitor. In this report, ethanolamine contains monoethanolamine (MEA), diethanolamine (DEA) and triethanolamine (TEA).

This report includes market status and forecast of global and major regions, with introduction of vendors, regions, product types and end industries; and this report counts product types and end industries in global and major regions.
