### SUMMARY

Noise-Cancelling Headphones is a type of high performance headphones taking Active Noise Reduction Technology to reduce unwanted ambient sounds. This is distinct from passive headphones which, if they reduce ambient sounds at all, use techniques such as soundproofing. In this report, Noise-Cancelling Headphones refer to Active Noise-Cancelling Headphones. Active Noise-Cancelling Headphones is used in the sophisticated noise-cancelling headphones that pilots use. Headphones like this have a small microphone built into their case. The microphone constantly samples the background noise and feeds it to an electronic circuit inside the headphone case. The circuit inverts (reverses) the noise and plays it into the loudspeaker that covers your ear. The idea is that the noise you would normally hear is canceled out by the inverted noise—so all that's left (and all you hear) is near-silence or the music you want to listen to.
