### SUMMARY

Oligosaccharide is a carbohydrate polymers comprise three to ten monosaccharides, or, simple sugars. They were linked together mostly by O-glycosidic bond through condensation reaction between an anomeric carbon of a monosaccharide and the other. They can also form N-glycosidic linkages under certain atmosphere. The minimum numbers of reducing sugar components is one molecule lesser than the total number of simple sugars. Reducing sugar can be characterized from the hydroxyl group (-OH group) on the anomeric carbon.
