SUMMARY

Refinery process additives (RPA) are the chemicals used to enhance the performance of fuel by meeting the fuel specifications setup by government authorities. These additives are added at the time of refinery process as well as can be used to recuperate the performance of particular end product specification such as diesel or gasoline. The Refinery Process Additives products are used in various refinery processes such as distillation process, reformer system, cracker, coker, filling plant process, catalytic reforming, desulfurization, vacuum distillation and so on. These products are only used by oil and gas industry.
