SUMMARY

Spinal fusion products are used in spinal fusion surgery. The products are involved in removing the damaged disc and replacing it with any fusion products. Non-fusion products are used during spine surgery, which are implanted to treat spine conditions. This also allows the patient to retain its movement and flexibility. The non-fusion products are becoming the treatment of choice, especially for the younger, more active patient. Increase in number of spine surgeries, rise in use of bone grafts and bone morphogenetic proteins in spinal fusion surgery, growing number of spinal surgeries using electrical stimulation devices such as inductive coupling devices, captive coupling devices and other implants drives the market growth rate by 2025.
