SUMMARY

Electric guitars are a type of guitars in which strumming the strings themselves is not the primary source of the sound. Rather, the vibrations caused by the movement of the strings are captured and magnified electronically in order to produce a louder output. The sound of an electric guitar can also be electrically modified, since an electrical representation of the vibration of the string is produced in electric guitars. This can then be modulated with the help of dials and other controls on the electric guitar as well as pedals. This is the primary factor distinguishing electric guitars from acoustic guitars; the sound produced by the latter comes directly from the vibration of the strings and thus can't be modulated electronically.
