### SUMMARY

Enhanced Fire Detection and Suppression Systems belongs fire protection systems. It can be divided into fire detection system and fire suppression system. The first step toward halting a fire is to properly identify the incident, raise the occupant alarm, and then notify emergency response professionals. This is often the function of the fire detection. A variety of automatic fire detectors have been developed. Automatic detectors are meant to imitate one or more of the human senses of touch, smell or sight. Thermal detectors are similar to our ability to identify high temperatures, smoke detectors replicate the sense of smell, and flame detectors are electronic eyes. The properly selected and installed automatic detector can be a highly reliable fire sensor. Fire detection systems include sensors and detectors, and the detectors usually include flame detectors, smoke detectors and others. Some has FIRD systems.
