SUMMARY

High Heat Melamine Foam is a foam-like material consisting of a formaldehyde-melamine-sodium bisulfite copolymer, widely used in industrial, construction, transportation, aerospace etc. Melamine foam belongs to thermosetting plastic foam, and the traditional polyethylene, polystyrene and low crosslinking degree of polyurethane foam (working temperature is 80 °C, and more than 80 °C when the distortion and decomposition), compared with high thermal stability and aging resistance, can be in for a long time - between 180 °C to 200 °C temperature range of the stable work, can bear the high temperature of 240 °C in the short term. Therefore, melamine foam can replace polyolefin in broad areas, such as polystyrene, polyurethane foam plastics. High Heat Melamine foam is flame retardant, heating and insulating, and heat resistant. Melamine scum is often mixed with other materials to create various products. It has been used for over twenty years as insulation for pipes and ductwork, the low smoke and flame properties of melamine foam prevent it from being a fire hazard.
