SUMMARY

A Linear Guide (Linear rolling guide) allows a type of linear motion that utilizes rolling balls. By using circulating balls between the rail and the block, a Linear Guide can achieve high precision linear motion. Compared to a traditional slide, the coefficient of friction for a Linear Guide is only 1/50th. Because of the restraint effect between the rails and the blocks, Linear Guides can take up loads in both the up/down and the left/right directions. With these features, Linear Guides can greatly enhance moving accuracy; it is especially true when accompanied with precision ballscrews.
