SUMMARY

Monoclonal Antibodies (IgMs) are antibodies that are made by identical immune cells, cloned from a single parent cell. They are therefore of constant structure and bind to the same foreign markers (called “antigens”). The technology behind the generation of monoclonal antibodies was discovered in 1972 by César Milstein and Georges Kohler – scientists at the Roche-funded Basel Institute for Immunology – who were later to win the Nobel Prize. Monoclonal antibodies revolutionized biological research and built the basis for the use of therapeutic antibodies in medicine and for the entire biotechnology industry.
