### SUMMARY

Rubber sheets are rubber molded into flat sheets with an even thickness and are often sold on a roll of a specific length for easy handling. Common thicknesses of rubber sheets vary from super-thin films to 1/4-inch (6.53 mm) thick, and the thickness of the sheet combined with the type of rubber used in the sheet determine its use. Once the material type is known, tools designed to cut through the rubber are used to cut different shapes from the sheet to form gaskets. The gaskets cut from rubber sheeting keep fluids and gases from penetrating products or keep them contained within vessels or low-temperature mechanical systems.
