SUMMARY

Sandalwood is a parasitic tree and obtains nutrients from several other plant species. While there are other species of sandalwood, including red sandalwood, Australian Sandalwood Network (*S. spicatum*) and New Caledonian Sandalwood (*S. austrocaledonicum*), these are quite different from true *Santalum album* and have very different properties and fragrances. There is another tree that yields an essential oil which is sometimes called West Indian sandalwood or amyris (*Amyris balsamifera*) – it is from Haiti and other islands in the West Indies and is not related to true sandalwood. It is, however, sometimes used as a sandalwood substitute, especially in products such as sandalwood soap, where using the true sandalwood would be too expensive. Sandalwood products are obtained from the sandalwood tree (*Santalum album*), which is a member of the Santalaceae family. It is known as white sandalwood, Mysore sandalwood, East Indian sandalwood, sandal, Chandan (Hindi), and tan xiang (Mandarin). The white sandalwood is an evergreen tree which grows to 50 feet and naturally occurs in Eastern India in the states of Mysore, Kerala, Tamil Nadu and Karnataka. It grows in dry and rocky environments and reproduces by suckers and by seeds. The environmental conditions required by this tree are rather strict and not completely understood. Due to a combination of the environmental requirements and the necessity of living off a host plant, Sandalwood is not easy to propagate. Even so, it has long been cultivated in other Southeast Asian locations, including Indonesia where some good quality Sandalwood essential oil is produced.

HeyReport estimates that the Sandalwood market size will grow from xxx Million USD in 2020 to xxxx Million USD by 2025, and with a CAGR of xx%. The base year considered for this report is 2019, and the market forecast is projected from 2021 to 2025.
